

# Event-Driven Architecture Workshop Common Errors

## Configuration & Connection Errors

### Salesforce

- **Salesforce Connection:** You may need to include the Security Token in your connection string. Please follow the following instructions to get your security token: [https://help.salesforce.com/articleView?id=sf.user\\_security\\_token.htm&type=5](https://help.salesforce.com/articleView?id=sf.user_security_token.htm&type=5)
- **Incompatible Connection** (esp. for Salesforce Connection): If you are using the connection for another flow in the Mule Flow Designer, you will get an 'incompatible connection' error when you try to reuse it in a new flow. Simply set up another connection with the same username/password.
- 

### RabbitMQ

- **Vhost:** RabbitMQ Mule Connector (AMQP) connector requires Vhost which has the same value as username.

### MuleSoft

- The Mule Cloud Flow Designer continues to show “**Loading**” or “**Refresh**” on the top right - and doesn't allow configuration to proceed - i.e., some of the buttons are grayed out. It's possible that the Mule Cloud Flow Designer needs to be “Refreshed”. To restart the Mule Cloud Flow Designer, simply refresh the browser page or click on 'Refresh' (if the button appears on the top right corner of the page).
- When configuring connection information in the Mule Connectors, you may not be able to test the connection (The “Test” button may be grayed out). In this case save the configuration without testing, exit from the connector screen, and then refresh the Cloud Flow Designer (by refreshing the browser window/tab).

## Runtime Errors

- **Data doesn't flow and no obvious errors in the Mule Flow Designer Page:** Once you have the flow successfully configured and you run it (by inserting a record in the MySQL database or Salesforce) you don't see the data having transmitted to the other system. At the same time, in your Mule Flow Designer, you don't see any error message. It is quite likely that you have run out of limits in your free tier MySQL database and/or RabbitMQ. You may need to come back to your Flow after few hours. However, you can go on to the next section in your Student Guide (Explore).
